GALLIKER RELIES ON INFORMATION SECURITY

Galliker sets new standards for the protection of sensitive data with a certified information security management system (ISMS) in accordance with ISO/IEC 27001:2022. We strengthen the trust of our customers and partners through clear processes, high security standards and a strong sense of responsibility.

Galliker sets standards in information security

Information is valuable and must be optimally protected against threats. Increasing demands from legislators and the market require companies to have a high level of awareness of their responsibilities and duty of care towards all stakeholders in the area of information security. Galliker is aware of this responsibility and has built an information security management system (ISMS) as a foundation, had it certified according to ISO / IEC 27001 and is driving its further development.

We focus on all information that is processed in our company. This enables us to minimise risks and ensure the confidentiality, integrity and availability of information. We also strengthen the trust of our customers and partners with a high level of information security.

The protection goals of information security

Integrity: The information is reliable and cannot be manipulated

Confidentiality: Only authorised persons have access to the information.

Availability: Information is available at the desired times.

Certification as sustainable proof of quality

Customers and partners already benefit from our ISO 9001 (quality), 14001 (environment) and 45001 (health and safety) certifications as well as other certifications and authorisations in the food and healthcare sectors. With „Green Logistics by Galliker" and numerous sustainability labels, we also emphasise our awareness of action. The introduction of an information security management system (ISMS) at Galliker

is therefore an important and appropriate addition to the management systems that have been in place for many years.
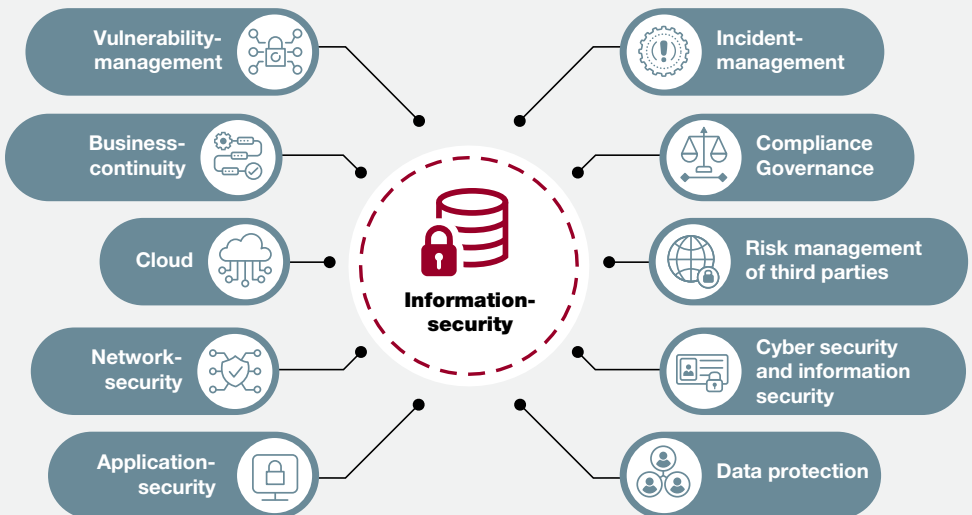

An ISMS according to ISO / IEC 27001

ISO / IEC 27001 is the gold standard for setting up an information security management system (ISMS). The standard is widely used and recognised around the world. It enables companies and organisations to systematically strengthen their information security.

Information about our certificates

ISMS according to ISO / IEC 27001

- Vulnerability-management
- Business-continuity
- Cloud
- Network-security
- Application-security
- Information-security
- Incident-management
- Compliance Governance
- Risk management of third parties
- Cyber security and information security
- Data protection

The holistic approach for maximum information security

The information security management system (ISMS) is our plan that places the security of company information at the centre. It encompasses employees, processes and systems. By adhering to good security and the vigilance of each individual, together we create a secure and trustworthy working environment.

Advantages of our ISMS

Our ISO / IEC 27001: 2022 certification confirms our commitment to sustainable quality.

› Certified management system (ISO / IEC 27001:2022)
› Protection of confidentiality, integrity and availability
› Protection of sensitive data
› Compliance
› dentification, assessment and minimisation of security risks
› Early detection and prevention of threats
› Business continuity
› Increased trust from customers, partners and stakeholders

With Galliker as a strong and reliable partner in your supply chain, you benefit from the best possible quality in the long term - also in all matters relating to information security. If you have any questions about information security at Galliker, please do not hesitate to contact us. We look forward to hearing from you.
